Location of ramps to prevent protrusion of handrails at internal corridors

In accordance with AS1428.1-2021 Clause 10.3 (g), ramps that intersect at an internal corridor need to be set back by a minimum of 400mm so that the handrail (compliant to Clause 12) does not protrude into the transverse path of travel.

As shown in the plan & section view below, Moddex recommends a set back distance of 450mm minimum to allow for our Assistrail closure bends.

@Moddex Group. All Moddex products are supplied subject to the Moddex Terms and conditions of sale. Moddex recommends all products and/or systems are installed by an inducted installer or other competent person. Moddex is not liable for the selection & installation of the right product and/or system. Moddex accepts no liability for any products and systems incorrectly installed or certified. While Moddex can provide assistance, recommendations or guidance in relation to product selection and installation, Moddex is not liable for any inaccuracy or misinterpretation whatsoever. Moddex cannot warrant structural integrity or suitability to which any product or system is attached to and must be assessed by a qualified design engineer. Failure of the customer to follow or adhere to applicable Australian Standards, Building Codes, WHS Acts & Regulations, Codes of Practice & Guidelines, site installation requirements may result in serious injury or death.
